

MSIA Forum

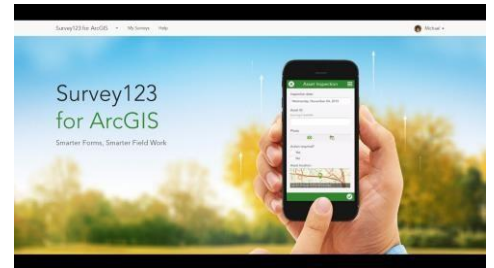

SIA Methodology: Smart Survey by Survey123 for ArcGIS

Royal Lake Club, Kuala Lumpur
~~25 April 2019~~ **2 May 2019**

Convened by

Malaysian Association of Social Impact Assessment in
collaboration with
MAP2U Sdn Bhd.

Social Impact assessment has its roots in government measures designed to understand the impacts of plans, policies and programs upon local communities and stakeholders. Since the 1990s, governments, venture philanthropists, foundations, high-performing nonprofit and social investors have entered the assessment field, experimenting with a range of tools, frameworks, and best practices. Take a walk through the last few decades and see how social impact assessment has evolved, and what it suggests for the future.

Part of the Smart Survey provided by Environmental Systems Research Institute (ESRI), Survey123 for ArcGIS, is a complete, form-centric solution for creating, sharing and analyzing surveys. Use it to create smart forms with skip logic, defaults, and support for multiple languages. Collect data via web or mobile devices, even when disconnected from the Internet. Analyze results quickly, and upload data securely for further analysis in the future.

This half-day forum seeks to encourage dialogue and sharing of experiences amongst various stakeholders, SIA practitioners, landuse planners and other impact assessors, pertaining landuse, people, and impact assessment methodology. It focuses on Social Impact Assessment, leveraging on new technology provided by "Smart Survey by Survey123 for ArcGIS" to improve SIA preparation by way of creating powerful survey template and 'Getting Answer from Anywhere'. It is responsive, site-specific, time-saving and its credible survey analysis would help make better decisions and complement with qualitative methods.
